

RAUL PAYA

Software Developer

PROFILE

I'm a former electromechanical engineer at Spanish Navy. I had been on duty for more than 10 years.

After early retirement, I'm trying to refocus and pursue my professional career as a software developer, one of my biggest passions.

I came to Japan in 2017 to study programming with the objective to land a job here and establish myself in this country.

Now I'm based in Tokyo and looking for a full-time job in the software development industry.

Even though my experience as a programmer is not solid yet, I have gained lot of hand-on experience in many other areas like as a team leader, resource management and knowledge of IT industry in general.

I see myself a highly responsible and confident person at work, and I'm always studying new matters on my spare time.

For personal hobbies, I like running and cycling to keep me healthy.

Should you have any concern or question about my profile and capabilities, please feel free to contact me.
